

Why do I need to clean my ducts?

Cleaning your system and air ducts will help improve the efficiency of your system and help with the indoor air quality of your home or office.

The buildup of debris and/or contaminants makes your system work harder and therefore less efficient; which ultimately leads to a shorter lifespan of your system.

While having dirty ducts doesn't necessarily mean your home is "dirty" or "unhealthy", but it definitely can contribute to certain health issues.

Since your heating and air conditioning equipment is the most expensive appliance in your home, don't you want it to last as long as possible?

BREATHE.

According to the NADCA, in a typical 6 room home, up to 40 pounds of dust is created annually just through everyday living. You can breathe easy knowing that your ducts are dust-free!

Frequently Asked Questions

FAQ

“Do you have that \$99 special?” Be aware of advertisements like this! Though it sounds good, rest assured there are plenty of hidden costs. Our free estimates ensure that there will be absolutely NO HIDDEN COSTS!

“When should I get my ducts cleaned?” It's never a bad idea to rid your duct work of debris and dust. However, there are certain times that cleaning is highly recommended, including: after a renovation; when moving into a new home with an existing duct system; if mold is visible; if your ducts are infested with rodents or insects; or if you can see particles being released from the supply registers.

“Will cleaning my ducts help my system's efficiency?” It is a good idea to get your entire system cleaned-not just the duct work. While getting your ducts cleaned can help eliminate odors, dust and grime, just cleaning those alone won't help with the efficiency. The real “efficiency sucker” is when other important components are dirty. Having the burners, coils, fan motor, and fan housing cleaned as well will help boost efficiency.

IMPORTANT FACTS & TIPS

Did you know that the air inside your home is re-circulated on an average of 5-7 times per day?

The Preferred Heating & Air duct cleaning system offers DOUBLE the suction than most other systems. It allows us to clean bigger homes and commercial spaces without losing any suction. This duct cleaning system has three filters to ensure that no dirty air will escape. We also have a duct inspection cleaning camera that allows us to see inside the duct work to maximize our performance and guarantee that the job is completed properly.

DUCT CLEANING SERVICE:

HOW TO SCHEDULE DUCT CLEANING SERVICE

1. Schedule a FREE estimate
2. Receive a FREE proposal
3. Agree upon written proposal
4. Schedule your cleaning service

WHAT TO EXPECT ON CLEANING DAY

- ✓ We will turn off the system for safety
- ✓ Cut hole in duct work
- ✓ Connect hose to duct work
- ✓ Seal all registers
- ✓ Clean each supply run & main trunk line one at a time with tools and cameras
- ✓ Unseal registers, remove and clean
- ✓ Re-attach registers
- ✓ Seal hole in duct work with new metal
- ✓ Check seal for leaks

ENJOY YOUR FRESH, CLEAN AIR!

Changing your air filter regularly as recommended by professionals is a very important step in helping to trap some of the dust and debris that would otherwise build up on other important components.
